We take over the production of **signage products** of all kinds (box letters, light boxes, flex face signs, monoliths, 3D designs etc). Our company has more than **20 years experience in the international and technical field**. **QUALITY CONTROL** is very important to us. Depending on the ordered product we choose the **latest** and most appropriate **technology** for the production of the wanted illuminated advertising.

Another strength of our company is the **project management in the Southeast European region**; We gladly take on for you the **survey, the permits and the installation and maintenance tasks in the region**.

SUTTNER.KFT

BOX LETTERS

We categorize our products according to the profile system. One of the most appreciated is the unlighted profile 01, with powder-coated aluminum body. Profile 3 sheds light to the rear, thereby creating a light crown the letter body. Larger, front illuminated signs are manufactured with profile 4 and aluminum bar. Smaller ones can be produced with profile 5 with plastic strip or profile 5 with no bar. Profile 8 has a Plexi cladding. This product also lights up on the sides. Profile 12 is a narrow inscription from solid Plexi.

FLEX FACE SOLUTIONS

These boxes, or giant letters are made primarily of profiles and bended aluminum. Film is stretched on returns. If the product is illuminated, mostly LED lamps are installed.

FASCIAS

Fascias can be illuminated or not, and are made of lacquered aluminum and bent, if necessary with different inlays that produce a 3D effect.

LIGHTBOXES

The simplest solution in the world of signage; with plexi front panel and painted aluminum cladding. They may be single or double sided. In narrow version it can be made very filigree.

MONOLITHS

These advertising materials come as outdoor or indoor versions with one or two sides. The outdoor model has a reinforced inner frame and an armature structure. If there is an illuminated advertising, the aluminum front panel of the graphic is made accordingly by milled plexi inlays. There are also versions with plexi front panel or stretch film.

DIGITAL SIGNAGE

This modern advertising medium combines digital technology with traditional constructions. Mostly displays are installed in totems, and programmed individually. They can also be centrally supplied with data. The product can also be interactive, i.e. equipped with touch function.

OUR TECHNOLOGIES

- 3D DESIGN
- CONSTRUCTION PLANNING
- GRAPHIC DESIGN
- WELDING
- PLASTIC PROCESSING
- GRAPHIC STUDIO (LAMINATING)
- VACUUM FORMS
- MILLING, CUTTING
- LIGHTING AND ELECTRIC ASSEMBLY
